

RESTRICTED**TABLE OF CONTENTS**

	<u>Page</u>
From the Preface to the first edition	3
Preface to the second edition	4
Introduction Preface. The object of map knowledge. Purpose & importance of the map	5

PART I**Brief Outline of the History of Cartography****Chapter I. The Primitive World**

1. Maps of primitive peoples	15
------------------------------	----

Chapter II. The Ancient World

2. Maps of the earliest civilized peoples	23
3. The Origin of Scientific Cartography in Antiquity	25
A. Greek Cartography	25
B. The Roman epoch and the beginning of the decline of cartography	35

Chapter III. The Middle Ages

4. The Decline of Cartography in the Epoch of the Early Middle Ages	37
5. Cartography of the Arabs and Chinese	42
6. Italian Compass Maps	47
7. The Age of the Renaissance and the great geographic discoveries	50
8. Problem of the northeast and northwest passages. Unknown southern country.	62
9. Cartography in Russia in the Pre-Stone Age	65
A. Maps of Russia, drawn up by foreigners and published abroad	65

RESTRICTED

RESTRICTED

<i>b.</i>	<i>a.</i> Map-sketches of Moscow and Siberia, drawn by Russians	70
10.	Development of cartography in the XVII and first half of the XVIII centuries	74
	<i>Q.1.</i> Evolution of the scientific basis of cartography in the XVII and first half of the XVIII centuries in Europe	74
	<i>b.2.</i> Growth of knowledge concerning Northern Asia in the XVII century and into the first half of the XVIII century Russian expeditions	80
	<i>c.3.</i> Russian cartography in the XVII and XVIII centuries	82

Chapter IV. Modern Period

11.	Transition to the modern period in the second half of the XVIII century	90
12.	Principal Stages in the Development of Cartography in the XIX century in connection with the progress of Science and Technology	95
	<i>Q.</i> Development of Geographic Knowledge	95
	<i>b.1.</i> Degree of Measurement - Measurement of degrees	98
	<i>c.1.</i> Development of Map Computation Work	101
	<i>d.1.</i> New Techniques in Cartography	108
13.	Cartography at the Beginning of the XX Century and before the Great October Socialistic Revolution	111
	<i>Chapter V. Socialist Regime</i>	
14.	Development of Cartography in the USSR after the Great October Socialistic Revolution	116
	<i>a.1.</i> The Founding of Soviet Government Cartography	116
	<i>b.1.</i> The most important cartographic, geodetic and topographic works, accomplished in the USSR at the time of the Great October Socialist Revolution	117
	<i>c.1.</i> Investigation	
	<i>c.2.</i> Study of the Soviet North and other expeditions	123

RESTRICTED

PART II RESTRICTED

**MODERN GENERAL GEOGRAPHIC SURVEY MAP AND ITS ELEMENT
By
ANALYSIS ACCORDING TO ELEMENT**

**Chapter VI. Topographic and General Geographic
Survey Maps as basic ~~typical~~ map types**

Map Content	131
16. Topographic and General Survey Maps	134
17. Map Nomenclature	136

**Chapter VII. Mathematical Elements
of Maps**

18. Contour and size of the country Earth	141
19. Representation of the earth on a plane	148
20. Conventional representation of the earth's ellipsoid on a plane. Concept of projections.	150
21. Scale of representation in cartographic projections. Basic maximum direction. Indicatrix. Formula of particular scale at any point of projection	152
a. Basic direction	152
b. Indicatrix	153
c. Formula of particular scale at any point of projection	153
22. Distortion of projection	157
a. Distortion of lengths	157
b. Distortion of angles	158
c. Distortion of area	160

RESTRICTED

~~RESTRICT~~

23. Classification of projections	160
1. Classification of projections by type of distortion	161
2. Classification of projections by ^{type} manner of structure	162
24. Collated table of basic cartographic formulas and accepted letter designations symbols	165
25. Azimuthal perspective projections	165
a. General information	165
b. Aspects of azimuthal perspective projections in relation to location of points of view and pictorial surfaces	166
c. Orthographic projections	167
d. Stereographic projections	169
e. Central projections (Anomonic projections)	175
f. External projections	177
26. Projections of azimuthal non-perspective	179
g. General information	179
h. Equidistant projection of Postel	179
i. Equidimensional projection of Lambert	182
27. Cylindrical projections	186
j. General information <u>equidistant</u>	186
k. Equidimensional cylindrical projections: quadratic and right-angled square and rectangular	187
l. Mercator projection	191
m. Lambert's equidimensional cylindrical projection <u>Gall's</u>	194
n. Hohenberg cylindrical stereographic projection	196
o. Oblique cylindrical projection of Solov'ev	199
28. Conical projections	200
q. General information	200
r. Ptolemy's equidistant projection	203
s. Kavrayskiy's equidistant projection	205
t. Krasovskiy's equidistant projection	205
u. Lambert-Gauss right-angle projection	207
v. Construction of a cartographic grid in conical projections	211

~~RESTRICT~~

RESTRICTED

29. Conventional projections	213
a. Pseudocylindrical projections	213
b. Bonne/pseudocylindrical projection	222
c. Greenian arbitrary projection	226
d. Globular, or spherical projection	229
30. Polyconic and polyhedral projections	231
a. Nature of polyconic projections. Simple polyconic projection.	231
b. Projection of government map of the SSSR, Scale, 1:1,000,000 and standard map of the world.	234
c. Projections of large-scale maps. Muffling projection.	235
31. Derived projections	240
a. Aitov's projection	240
b. Goode's projection	242
c. Eckert's split projection	243
32. The most generally used projections	243
33. Frame maps map borders base	245
34. Representation of support points on maps	246
a. Astronomical points	249
b. Triangulation points	250
c. Polygonometry points	250
d. Elevation support points	251
e. Bench marks	

Chapter VIII . Elements of physico-geographic

characteristics of territories on a general geographic map.

35. Hydrographic contours	252
36. Representation of relief on maps	255
a. Method of horizontal contour lines	255
b. Hypsometric method	259
c. Method of hachure	261
d. Dot method	264
e. Method of radiating lines and shading	264
f. Relief map models	266
g. Perspective method of representing relief	267
h. Representation of ravines, cliffs, crevices, and ridges	269
37. Representation on maps of soil cover	269

RESTRICTED

RESTRICTED

Chapter IX. Socio-economic phenomena on the General
Geographic Map.

38. Permitted points and conventional ^{the} location done in which such them	270
39. Elements of economic and cultural character visible on General maps	277
40. Element of additional general nature of General maps	278

Chapter X. Elements of topographic maps and atlases.

<u>Conventional</u>	<u>keys</u>
41. Classification of maps and atlases	281

PART III

PRINCIPAL TYPES OF CONTEMPORARY MAPS AND ATLASES.

ACTION ^{CATION OF}
COMPILED AND PUBLISHED MAPS. CARTOMETRY.

Chapter XI. Principal Types of Contemporary Maps and Atlases.

42. Classification of maps and atlases	285
A. Classification of maps	285
B. Classification of atlases	289
43. Methods of showing phenomena on special maps	291
Choropleth a. Colored background method	291
b. Dot method	292
c. Isopleth d. Conventional symbols	293
	294

RESTRICTED

RESTRICTED

<i>e.</i> Pie-graph method	296
<i>f.</i> Lines of movement	296
44. Special maps	297
<i>a.</i> Special physico-geographical maps	297
<i>b.</i> Socio-geographical maps	302
(1). Special maps of population	302
(2). Special economic maps	306
(3). Political and administrative maps	311
(4). Historical maps	312
45. Special purpose maps	314
46. General geographic and special atlases	323
<i>a.</i> General geographic atlases	323
<i>b.</i> Special atlases	323
47. Cartograms, cartodiagrams, block diagrams, profiles	329
48. Relief contour maps and globes	331
49. Projection globes	332

G H
Chapter XII. Brief information concerning the
Composition of Geographic Maps.

50. Preliminary operations toward the composition of maps	333
<i>a.</i> Setting up map programs	333
<i>b.</i> Selection of materials for the composition of maps	336
<i>c.</i> Selection of the elements of map contents and the compilation of lists of geographic names for the determination of transcriptions ^{lettering} transcriptions	339

RESTRICTED

7 RESTRICTED

RESTRICTED

<i>the map program and other</i>	
<i>for the</i>	
<i>approval of the Main Administration of Geodesy and</i>	
<i>Cartography (GUK)</i>	
51. Composition of the original map	340
a. Preparation of the basis for drawing	340
b. Computation and synthesis construction of cartographic grid	341
c. Preparation of materials for filling in the	
cartographic grid	345
d. Filling in the cartographic grid	347
e. Assembling the map	361
f. Editing and correcting of the compiler's original map	362
52. Preparation of the map for publication and issue	362

Chapter XIII. Brief Instructions concerning

Methods of publishing maps.

53. Methods of publishing maps	365
<i>Wood block, linoleum and zinc engraving</i>	
54. Xylography, linography, zincography	366
55. Engraving on metal	369
<i>a. Direct engraving of the metal</i>	369
b. Etching	371
c. Photogravure	371
56. Lithography	373
57. Zincography and photography <i>offset printing</i>	378
58. Preparation of <i>printing of maps</i> in the photomechanical processes	381
a. Photogravure or heliogravure	381
b. Photolithography	385
c. Photogalvanography	384

RESTRICTED

RESTRICTED

Chapter XIV. Cartometry

59. Solution of basic problems ^{map} in the map	385
a. 1. Determination of the geographical coordinates of points	386
b. 2. Determination of the scale	386
c. 3. Measurement of the length of straight lines	387
d. 4. Measurement of the length of curved lines	389
e. 5. Area measurement	391
f. 6. Plotting isogonies ^{loxodromes} and orthodromes on a map by the graphic method	394
Appendix	395
